

## Sustainable Energy Authority of Ireland: Support Scheme for Energy Audits

- Does your business want to save energy, save money, and enhance your brand by becoming more sustainable?
- Do you spend more than €10,000 on energy per annum?
- Did you know SEAI offer a €2,000 voucher towards the cost of a professional energy audit?

Deciding what improvements your business needs can be daunting. One of the first steps should be getting an energy audit.

An energy audit identifies tailored energy saving opportunities that can save businesses up to 30 percent on energy bills and help to reduce climate impact.

It is a **three-step process** which involves analysis of **energy bills, a site visit, and an audit report** with an energy action plan. It will also assess whether renewable energy technologies are a viable option for your business.

An energy audit will help you discover:

- How much energy your business uses
- The equipment and processes that use the most energy
- The actions you should take to save energy, and their estimated cost and impact

Join other hotels that have registered for an energy audit voucher and be part of our online tutorial to learn how easy it is to apply and get started on your energy improvements for 2022.
